

Delivering greater performance, speed and optimization

PowerOLAP® has been dramatically empowered in the latest release, Version 9. One of the biggest features developed in this version is a 64bit Server Platform. The 64bit platform removes restrictions on functionality such as memory usage and database size, maximizing your performance and enabling you to query the largest data sets with the most complex multidimensional analytics.

Many PowerOLAP® features have been optimized to save you time and energy including the caching and dependency functions, integration with MS Analysis Services, as well as save and load performance for opening and saving databases. For import and export functions, limitations have been eliminated, and the Scheduler and Tasks routines can now be executed through Excel. IDS features have been enhanced to support write back and to provide clientless access to PowerOLAP® Data--in both Google and via Mobile PowerOLAP®.

Version 9 Enhancements:

- **PowerOLAP now offers a 64bit Server Platform**
 - Offers unlimited memory utilization
 - Unrestricted database size
- **Significant increase in maximum thread handling capabilities on the PowerOLAP Server.**
- **Save and Load**
 - Optimized functionality stores data more efficiently, improves saving performance and the speed of loading data
- **More Intelligent Caching, Dependency Clearing, and Regeneration**
- **The clearing of cache only occurs when it absolutely must**

The following Clears Cache

- Member Change
- Hierarchy Change
- Subset Change
- Formula Change

The following Does Not Clear Cache

- Dependency Change
- Persistent Calc Change
- Fact Security Change
- Cube Property Change

- **Reduction of Dependency Regeneration**

The following Regenerates Dependencies

- Member Change
- Dependency Change

The following Does Not Regenerate Dependencies

- Hierarchy Change
- Subset Change
- Formula Change
- Persistent Calc Change
- Fact Security Change
- Cube Property Change

- **Export and Import Enhancements**

-Improved Import and Export functionality eliminates limitations

- **Analysis Services**

- Integration Using Analysis Services 9.0 Driver allowing connection to AS 2005 and AS 2008 (Previously only AS 2000)

- Optimized Integration Using Dynamically Written MDX Queries

- Offers significant performance improvements by pre-querying the values from Analysis Services.*

- **IDS**

- Enhancement to IDS Web Interface (IDS Slice and Portal)

- IDS Web Functionality Supports Write Back

- Clientless Zero Install Zero Footprint ability to access data in PowerOLAP

- **Tasks and Scheduler Enhancements**

- V9 - Task and Scheduler Routines can be executed from Excel

- **Licensing**

- Clients connecting in a server-only environment no longer require any licensing.

- **Drill Through**

- Drill through has been optimized to query fewer points from the relational database.

- **OLAP Query Write-back**

- The OLAPQuery function in Excel now supports writing data back into a PowerOLAP Cube.

You thought PowerOLAP was awesome before, wait till you try V9!

“PowerOLAP just keeps getting better.”

-review by a PowerOLAP® user
